---

*With over four years of experience developing video games and interactive applications on the Unity platform, I acquired diverse backend skills as the programmer on each project. I also learned to contribute effectively at every stage of application or video game development, from initial setup to publication on Android, WebGL, and other platforms.*

*I am comfortable working in both 2D and 3D environments, successfully implementing SDKs and/or third-party tools such as Firebase, PlayFab, and Photon. I also have experience working with other technologies such as virtual and augmented reality.*

## PROFESSIONAL EXPERIENCE

---

### Independent Video Game Developer

Freelancer

La Paz, Bolivia

August 2025 – At the moment

#### Desktop Overlay Idle Game

- I programmed an interactive Idle/Pet-style video game in Unity that runs as a transparent overlay on the Windows desktop, allowing user interaction without interrupting other tasks. I implemented the logic engine for the autonomous simulation of character states (energy, hunger, rest, and sleep cycles), an internal economic system for the dynamic management and purchase of resources, and an editing tool for positioning decorations and buildings.

#### Real-Time Geolocation and Monitoring System

- I developed a native Kotlin mobile application integrated with a web dashboard for real-time tracking and synchronization of geographic coordinates, implementing the Mapbox API and geofencing algorithms for automated perimeter control and alerts. I structured the data transfer architecture with Firebase to ensure communication with the dashboard and implemented optimized background services to minimize battery and resource consumption during extended journeys.

### Tecnonautas

Facilitator and Guide

La Paz, Bolivia

April 2025 – July 2025

- I taught robotics and programming logic sessions using the LEGO Mindstorms ecosystem (for advanced students) and early learning Lego Spikes (for younger children), adapting the technical complexity according to age.
- I guided the students in the physical construction of prototypes and in the programming of sensors (distance, color, touch) and motors to solve interactive challenges.
- I prepared periodic progress reports to evaluate the development of children's computational and logical thinking, optimizing the teaching methodology.

### TodoGames

Unity Developer and Programmer

La Paz, Bolivia

2022–2024

#### Alarma y Futbol Dado (BAGÓ)

- **Alarma Bagó:** I programmed the native authentication system (Google/Facebook) and developed a predictive search engine with autocomplete for medication management and intake, integrating Firebase as the database.
- **Fútbol Dado:** I developed the real-time multiplayer architecture using Photon SDK (turn synchronization, grid movement, and matchmaking) and implemented PlayFab SDK for session control and cloud saving.

#### Wonder Math - Capacita Global Internacional

- I programmed the minigames in Unity (infinite runner, shooting mechanics and quizzes) adapted with a responsive interface for cross-platform deployments (Android and WebGL).

#### Viva Formula 1 2023 - VIVA

- I developed an immersive virtual reality driving simulation integrating the Oculus SDK, including programming the Artificial Intelligence (AI) for the opposing vehicles.
- I optimized the overall performance of the software (profiling), drastically reducing loading times and RAM consumption on target devices.

#### Lektotinkuna - Save The Children

- I structured the main game mechanics (grid exploration and interaction with the environment) and developed a dynamic system of missions and achievements based on user progress.

- I programmed an internal virtual store with its own integrated economy using PlayFab for inventory management and secure download of digital books in PDF format.

### **Learning with the Aduana - Aduana Nacional de Bolivia**

- I developed the interactive core of the game (roulette and trivia system) using a Scriptable Objects-based architecture, allowing the client to configure and scale the question bank without needing to modify the source code.

### **Technical Mentor and Programming Instructor**

*Private lessons and specialized tutoring*

**La Paz, Bolivia**

*May 2022 – June 2023*

### **Specialization in C# Language and Technical Fundamentals**

- I gave personalized sessions focused on teaching programming fundamentals and rigorous mastery of syntax and best practices in C#.
- I designed learning dynamics based on solving algorithms and coding challenges, successfully accelerating the development of programming logic and logical thinking in students.

### **Video Game Development and Mechanics Tutorials in Unity**

- I guided the students through the entire video game creation cycle, from gameplay conception to the configuration and deployment of the Unity engine.
- I provided consulting services on code architecture and the implementation of basic Artificial Intelligence for dynamic agents.
- I oversaw the optimization and compilation workflows for the successful export of projects to various platforms (Android, PC, and WebGL).

## **EDUCATION**

---

### **UNIVERSIDAD PRIVADA DEL VALLE**

*Studying Computer Systems Engineering*

**La Paz, Bolivia**

*2025- At the moment*

### **UNIVERSIDAD PRIVADA DEL VALLE**

*Advanced Technician in Video Game Development*

*Honors: Recognition in the Hall of Excellence*

**La Paz, Bolivia**

*2018 - 2021*

### **UNIVERSIDAD MAYOR DE SAN ANDRÉS**

*Diploma in Higher Education Based on Competencies*

**La Paz, Bolivia**

*2023 - 2023*

### **CISCO NETWORKING ACADEMY**

*Basic Computer Hardware Concepts*

**La Paz, Bolivia**

*2025 - 2025*

### **PROGRES AMERICA LATINA**

*Inspiring Study Conference With Google*

**La Paz, Bolivia**

*2025 - 2025*

## **SOFTWARE AND TECHNOLOGIES**

---

- Engines and Ecosystems: Unity, Unity Gaming Services, Oculus SDK (VR).
- Programming Languages: C#, Kotlin, JavaScript.
- Mobile and Web Development: Flutter, WebGL.
- Backend, Cloud and Data: PlayFab, Firebase, Scriptable Objects, JSON.
- Augmented Reality (AR): EasyAR, Vuforia.
- Maps and Geolocation: MapBox API, Geofencing.
- Tools and Services: GitHub, Photon SDK (Multiplayer), Unity Ads.

## **LANGUAGES**

---

Spanish - Native

English - Level B1
